

JAEGAR Searcher

A World Leading Long Range Surveillance Platform

The Jaegar Searcher is a highly modular ready to go Single Mast Surveillance solution, ideal for medium to long range surveillance applications using HD zoom video cameras and cooled thermal zoom cameras.

The fixed through shaft, running through the Jaegar Pan and Tilt (PT) allows the cameras to rotate 360° continuously while keeping a payload on top fixed in position, perfect to twin with radar and other detection technologies.

A range of thermal zoom cameras the 16.7 to 1000mm HD video camera are available, all supplied in cable managed housings for protection in the harshest environments. With harmonic drive gears as standard the Jaegar has virtually zero backlash ensuring the capture of stable images even at very long distances over land or water.

All Silent Sentinel Pan and Tilt systems are designed with absolute positing feedback as standard. So when twinned with radar or any automated control program it can be driven automatically to any threat detected and remain on target as the threat moves. As with all Silent Sentinel products the Jaegar can easily be deployed as a standalone system or a combined solution to increase the performance.

The Jaegar platform can be configured and optimised for a broad range of applications and operational theatres with the ability to detect, identify, track and react to the surveillance requirement.
